| <b>Target version:</b>                                                                          |                  |                        |            |
| <b>Description</b>                                                                              |                  |                        |            |
| Hi                                                                                              |                  |                        |            |
| It would be very great if you can extend subtlr oder subtle itself to load a sublet at runtime. |                  |                        |            |

History

#1 - 07/12/2009 10:03 PM - Christoph Kappel

- Assignee set to Non member users
- Priority changed from Urgent to High
- Target version set to 1

I will add this later - some things have a higher priority.

#2 - 07/17/2009 02:46 PM - Christoph Kappel

- Status changed from Unconfirmed to Fixed
- % Done changed from 0 to 100

Sarting with #1164 subtlr can load sublets as follows: subtlr -s -a foobar.rb

This sublets must be in the sublet loading path and the name cannot be longer then 20 chars.
